## ■ Module test and configuration

### Step 1: INIT switch Operation

1. Find out the INIT switch( back of the module), and turn to INIT.
2. Reboot the module

### Step 2: Install & Run DCON Utility

1. Please Install DCON Utility first  
You can find the software in the CD.

CD path:

<Driver>:\napdos\driver\dcon\_utility\

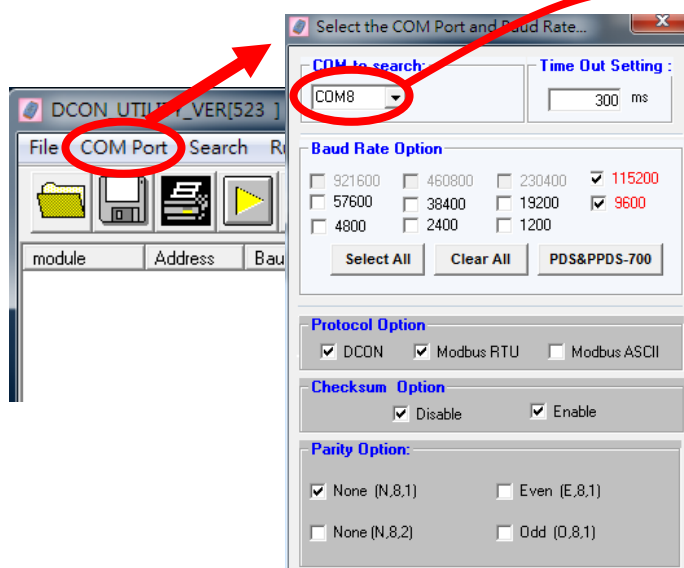

Web link:

[http://ftp.icpdas.com/pub/cd/8000cd/napdos/driver/dcon\\_utility/](http://ftp.icpdas.com/pub/cd/8000cd/napdos/driver/dcon_utility/)

2. Run DCON utility

### Step 3: Set search configuration & search module

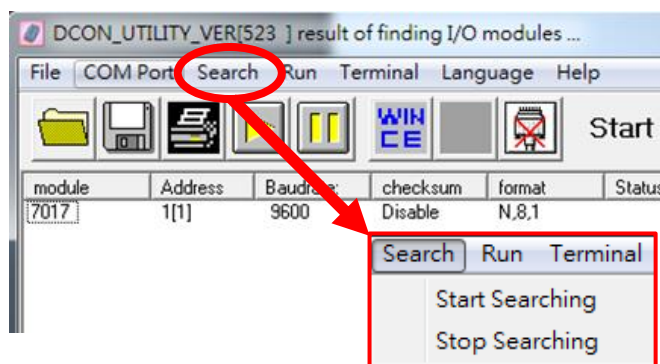

Select COM Port Number

1. Click "COM Port"
2. Assign the communication information and click "OK"

#### Module Default Setting

COM Port	Refer converter Port Number
Baud Rate	9600
Protocol	DCON for I-7000 Modbus RTU for M-7000
Parity Option	N,8,1

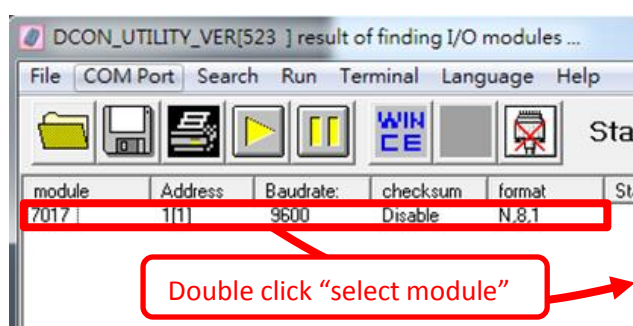

3. Click "Search" and select "Start Searching"  
Software will search the modules from COM Port
4. Click "Search" and select "stop searching"  
Manual stop when the modules searched

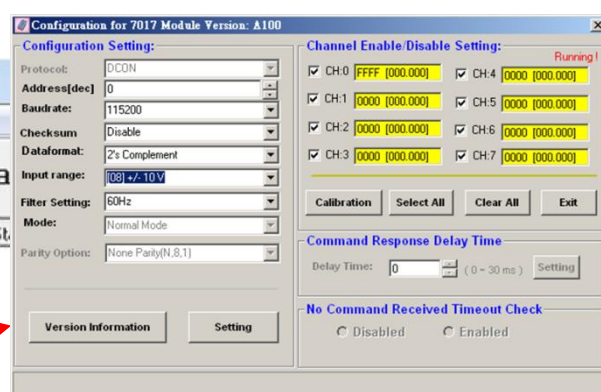

Note:

When no module can be searched, please check the wire and communication information

### Step 4: Select Module for testing and configuration

Double click "select module"

## Step 6: Change to normal mode and keep the settings

1. Turn the INIT Switch to Normal.
2. Reboot the module

## Trouble Shooting

### Q1. How to do when forgot module address or baud rate?

Please turn to INIT mode, and run DCON Utility to search.  
 The module supports DCON protocol at the INIT mode.  
 And the address is 0. The communication setting is "9600,N,8,1".

### Q2. How to configure the I-7000 and M-7000 modules?

ICP DAS provide DCON Utility to configure I-7000 and M-7000 modules.  
 Please download the last version from: [http://ftp.icpdas.com/pub/cd/8000cd/napdos/driver/dcon\\_utility/](http://ftp.icpdas.com/pub/cd/8000cd/napdos/driver/dcon_utility/)

### Q3. What is individual channel configuration?

I-7017(F) and M-7017 do not provide the "individual channel configuration".  
 If you need this function, please refer I-7017Z or M-7017Z.

### Q4. How to measure the current?

I-7017(F) and M-7017 require optional external resistance (125Ω) for current measurement.  
 Please refer wired connections diagram.  
 And then select a suitable input range by DCON Utility.  
 Or please use our I-7017(F)C or M-7017C modules.

### Q5. How to calibrate the analog input module?

Usually it is not necessary to calibrate the analog input module.  
 However, in case you need to perform this operation, we provide a function to calibrate the module.  
 Please refer to user manual 1.10.

Notice:

1. Please update DCON Utility to version 5.2.3 or more.
2. Keep the module running more than 30 minutes to warm-up.

### Q6. How to programming with I-7000 or M-7000 by C#, VB, VC?

ICP DAS I-7000 and M-7000 series both support DCON protocol. And Only M-7000 series supports Modbus protocol.  
 For DCON protocol, please download SDK and Demo from:  
[http://ftp.icpdas.com/pub/cd/8000cd/napdos/driver/dcon\\_dll\\_new/](http://ftp.icpdas.com/pub/cd/8000cd/napdos/driver/dcon_dll_new/)  
 For Modbus protocol, please refer this web link:
