Introduction

The GW-7472 (EtherNet/IP adapter to Modbus RTU Master/TCP Client Gateway) is helpful for data-exchanging between the Modbus RTU/TCP network, and the EtherNet/IP network. It reads the register data from the Modbus RTU slaves as well as Modbus TCP servers and publishes these data to the input register data of the EtherNet/IP scanner. The output data transmitted by the EtherNet/IP scanner are updated to the register data of Modbus RTU slaves/TCP servers via the GW-7472. Through the GW-7472, all of the Modbus slaves/servers can be regard as one EtherNet/IP adapter.
