### Connecting the Power and Host PC

1) Make sure your PC has workable network settings.

Disable or well configure your Windows firewall and Anti-Virus firewall first, else the "**Search Servers**" on **Chapter 5** may not work. (Please contact with your system Administrator)

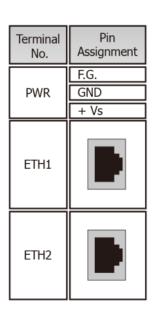

- 2) Connect both the ET-2251 and your PC to the same sub network or the same Ethernet switch.
  - <complex-block>
- 3) Supply power (+10~+30 VDC) to the ET-2251.

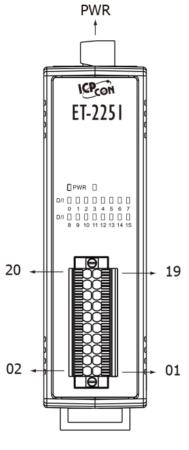

4) Verify that the "PWR" LED indicator on the ET-2251 is flashing.
